

INDEX TO VOLUME 51 — METAL FINISHING

JANUARY-DECEMBER, 1953

(Compiled by N. Hall, Editor, and I. Oquendo, Edit. Ass't.)

In this index all material that appeared in the January through December 1953 issues of *Metal Finishing* is listed according to subject matter, with cross references where required. Following each listing will be found a letter indicating the manner in which the material was published, as follows:

- | | |
|---------------------------------------|-------------------------------|
| (S)—Shop Problem | (M)—Manufacturers' Literature |
| (R)—Recent Development | (T)—Technical Literature |
| (P)—Patent | (L)—Letters to the Editor |
| (A)—Abstracts from Foreign Literature | |

Any reference not followed by a letter was a feature article. The numbers in the right-hand column refer to the month and page numbers; 6-85 means June issue, page 85, etc.

ABRASIVES, BELTS—See Polishing

ACID DIPPING—See Bright Dipping and Pickling

ALLOY PLATING

Brass Plating (A)	1-101
Immersion Brass on Steel (S)	1-103
Lead-Indium for Bearings (S)	1-103
Staining of Brass Deposits (S)	2- 81
Thin Deposit on Rough Surface (S)	2- 82
Tin-Nickel Baths (S)	4- 85
New Decorative Plating Processes Requiring No Nickel (R)	4- 92
Immersion "Brass" Coatings on Steel	5- 66
Plating for Rubber Adhesion (S)	6-113
Oxidation of Metals and Alloys (B)	6-142
Electrodeposition of Tin-Nickel Alloys	7- 64
Electroplating of Brass (A)	7- 70
Brass Plating for Rubber Adhesion (S)	7- 72
Tin and Tin Alloy Plating Bath (P)	7- 75
Iron-Containing Base Coated with Nickel-Phosphorus Alloy (P)	7- 75

Lead-Antimony Alloy Electroplating Bath (P)	8- 83
Analysis of Gold and Gold Alloy Solutions	9- 56
Imitation Gold Finish (S)	9- 82
Manganese Alloy Deposits (P)	9- 83
Glass Tanks & Brass Plating (S)	11- 81
Electrodeposition of Phosphorus-Nickel and Phosphorus-Cobalt Alloys (P)	11- 84

ALUMINUM

Aluminum Bright Dip (P)	1-106
Bright Dip for Aluminum (P)	1-106
Process for Making Colored Aluminum (P)	2- 85
Bright Dip for Aluminum (P)	2- 85
Aluminum Deoxidizing Process (R)	2- 90
Research on Electropolishing of Aluminum (A)	3- 84
Electropolishing of Pure Aluminum by Repeated Eloxal Anodizing and Dissolving of the Eloxal Coating (A)	3- 84
Bright Dip for Aluminum (P)	3- 91
Cast Aluminum Alloys for Electropolished and Eloxal Processed Parts (A)	4- 82
Pickling, Buffing and Coloring of Aluminum and Alloys before Anodizing (A)	4- 83

Tin Coating Aluminum (P)	4- 81
Aluminum Bright Dip (P)	5- 82
Testing of Anodic Films on Aluminum (A)	6-110
Significance of Etch Figures with Etching and Chemical Polishing of Aluminum (A)	6-111
Gold Colored Aluminum (R)	6-123
Aluminum Handbook (M)	6-139
Non-Etch Aluminum Cleaner (R)	7- 86
Analysis of Aluminum Alloys (B)	7-109
Aluminum Etch (P)	8- 87
Protective Anodizing of Highly Reflective Aluminum	9- 69
Coating Aluminum (P)	9- 83
Sequestering Agents in Aluminum Etching	10- 65
Chromium Plating Die-Cast Aluminum Engine Cylinders	11- 65
Anodizing of Small Mass-Produced Parts of Aluminum (A)	11- 79
Process for the Protective Treatment of Iron (P)	11- 85

Steam Traps Combine Temperature Control

Preston Products Co. in their new plating plant at Grand Rapids, Mich., have replaced ordinary steam traps on cleaning and rinsing tanks with Sarco Thermotons.

These are set to discharge condensate at adjustable temperatures below 212°F., in a continuous stream. Thus they maintain the desired bath temperature automatically, while at the same time preventing heat loss where condensate is discharged to the sewer.

Thermotons can be used outdoors as on storage tanks, rail or switch heaters, tank coils on ships, etc., without requiring protection against freezing.

For full information write for Bulletin 550-4 to **Sarco Company, Inc.** Empire State Bldg., New York 1, N. Y. No obligation, of course.

Advt. 611

Edmont Case No. 347:
Plating small pieces (bolts, nuts, fixtures, wrenches) unlined rubber gloves lasted 5 shifts, job-fitted coated gloves 13 shifts.

Edmont Case No. 211:
Handling ½" rope soaked in zinc cyanide, in plating dept. Previous gloves lasted 1 shift, job-fitted coated gloves 8 shifts.

Edmont Case No. 306:
Ordinary neoprene gloves used in glass company's lye room lasted 2 shifts; job-fitted NEOX coated gloves 14 shifts.

Job-fitted gloves wear longer in acids, caustics, solvents

Cost savings averaging 40% to 70%, as well as reductions in lost-time accidents, result when old-type work gloves are replaced with modern coated gloves which fit the job condition. Tell us your operation. Without charge, we will send samples of recommended gloves for testing.

Edmont Manufacturing Co.

Pressure Blast Application #304

Before Pressure-Blasting

After Pressure-Blasting and hard chrome plating

These 25 aluminum components were plated directly with .001" of chromium on the two shoulders immediately after Pressure Blasting as the only pre-plating operation! Seven individual dips and strikes formerly required to prepare surfaces for chrome plating were eliminated. Adherence has now proved excellent.

ONLY PRESSURE BLAST GIVES YOU 2-SPEED WET-BLASTING

MODEL A... ONE OF 4 STANDARD UNITS. CUSTOM MACHINES DESIGNED TO FIT SPECIAL REQUIREMENTS.

FREE... Learn what PRESSURE BLAST can do for you! Die and Mold Polishing, Blending, Grinding, Deburring, Heat Treatment, Scale Removal, Honing of Cutting Tools, Pre-plating Cleaning... Hundreds of proven, money-saving applications! Write for our new 8 page fully illustrated Booklet... or send samples of work you want tested to:

747-5 Windsor Street
Hartford 5, Conn.

Simplify your bright zinc plating with

McKeon's Zinc-Brite

TRADE MARK REG'D.

as a constant cleanser and purifier

It will:

1. Precipitate heavy metal impurities.
2. Co-precipitate copper impurities, eliminating need for zinc dust treatment.
3. Minimize need for decanting or filtering.
4. Precipitate excessive carbonates.
5. Reduce Brightener consumption.

Try a 5-gallon can, \$15.00; or a 15-gallon drum, \$42.75, on 30 days' approval.

Sulphur Products Co. Inc.

228 McKeon Way
Greensburg, Pa.

DIESEL CHEMICAL COMPANY

243 - 4th AVENUE
MAIN 2-0703-4

BROOKLYN 15, N. Y.
DEPT. 10

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 3, 1933, AND JULY 2, 1946 (Title 39, United States Code, Section 233) SHOWING THE OWNERSHIP, MANAGEMENT, AND CIRCULATION OF METAL FINISHING, published monthly at Westwood, New Jersey, for November 1, 1953.

1. The names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, Finishing Publications, Inc., 381 Broadway, Westwood, N. J.; Editor, L. H. Langdon, 381 Broadway, Westwood, N. J.; Managing editor, Nathaniel Hall, 381 Broadway, Westwood, N. J.; Business manager, Thomas A. Trumbour, 381 Broadway, Westwood, N. J.

2. The owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a partnership or other unincorporated firm, its name and address, as well as that of each individual member, must be given.) Finishing Publications, Inc., 381 Broadway, Westwood, N. J.; L. H. Langdon, 275 Engle Street, Englewood, N. J.; Palmer H. Langdon, Closter, N. J.; Louise H. Hasselback, 14 Westmoreland Road, Alexandria, Va.

3. The known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of the total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. Paragraphs 2 and 3 include, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting; also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner.

5. The average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the 12 months preceding the date shown above was: (This information is required from daily, weekly, semiweekly, and tri-weekly newspapers only.)

THOS. A. TRUMBOUR, Business Manager.

Sworn to and subscribed before me this 28th day of October, 1953.

ALTON S. KNOWLES

USE **COLUMBIA** TANK RHEOSTATS

It's easy to adjust your tank voltage to suit the load with a Cast Grid Type Columbia Tank Rheostat. Standard sizes from 15 to 5000 Amperes, 1 to 6 Volt drop. Other voltage drops as specified.

COMPARE THESE OUTSTANDING FEATURES:

- Cast Grid Resistors, rugged and resistant to chemical fumes.
- Cam Operated Toggle Switches, quick break, self-cleaning, positive contact, readily accessible, easily operated.
- Rugged construction and liberal design provide ample capacity for intermittent and momentary overloads.
- Entire rheostat, including instruments, easy to install.

FOR BETTER COPPER PLATING

DAYBRITE

ACID COPPER PROCESS

Let DAYBRITE solve your COPPER PLATING problems. Check these important, money-saving features:

- ✓ Low Conversion and Operating Costs
- ✓ High Plating Speed
- ✓ High Degree Of Leveling
- ✓ Smooth, Lustrous Deposits
- ✓ Ideal As Undercoat For Chromium After Color Buff or Brite Dip.

DAYBRITE is time tested and proven. Write now for technical bulletin giving full details.

PUMPS—See Filters & Pumps

Better Coils for Your Tanks

HEATING, cooling or spray rinse coils — Storts makes them all — all shapes — all metals. Storts coils are noted for smooth flow, efficient heat transfer and long service life. Order both tanks and coils from this one dependable source.

STORTS
WELDING COMPANY
INCORPORATED

38 Stone Street
MERIDEN, CONN.

Manufacturers of Welded Fabrications to Specification

FILTER 50-1500 GAL/HR ANY ELECTROPLATING SOLUTION

NO ROUGH DEPOSITS
NO PITTING

Service: Filters practically any acid or alkaline solution from pH 0 to pH 14; removes particles down to one micron in size. Strainer stops metallic objects.

Design: FILTER ASSEMBLY fabricated of stainless steel 316, high temperature lucite, rubber-lined, Havg, or Sethrin* resin. FILTER TUBES of cotton, dynel, porous stone, or porous carbon. PUMPS fabricated of Hastelloy, stainless 316, or plastic; centrifugal or self-priming. MOTORS drip-proof, totally enclosed or explosion-proof, 110 or 220 volt, single or three-phase, 50 or 60 cycle, sleeve or ball bearing. HOSE — outlet acid and alkaline resistant. BASE — phenolic laminate on rubber tire ball bearing casters.
